

First-Article Inspection Checklist

Complete this checklist on the first part after every setup or changeover, BEFORE running the batch. Production starts only when the first article passes and is signed off.

Setup verification

- Correct NC program number loaded and matches the drawing.
- Correct fixture installed; clamps torqued to the setup sheet.
- Work offset (G54) verified with edge finder or probe.
- All gauges present and in calibration (check sticker dates).

Dimensional checks (example part P-Bracket)

- Overall length 120.0 mm, tolerance +/-0.10 mm - caliper CAL-07.
- Bore diameter 25.00 mm, +0.02 / -0.00 mm - bore gauge CAL-12.
- Surface finish Ra 1.6 max - profilometer.
- Hole position true-position 0.1 mm - CMM.

Disposition

- All features in tolerance -> sign off, release the batch.
- Any feature out of tolerance -> quarantine, raise an NCR, call Quality.

Sign-off

Operator: _____ Inspector: _____ Date/Time: _____

Out-of-tolerance or missing spec? Do not guess - contact the Quality Engineer (ext. 4700).
