

Emergency Procedures - Quick Guide

Keep this guide visible at every workstation. In any emergency, protect people first, then property. Know your nearest exit and assembly point.

Emergency stop

- Press the nearest red E-stop to halt machinery immediately.
- Do not reset an E-stop until the hazard is cleared and the line is confirmed safe.

Fire

- Raise the alarm and call emergency services.
- Only fight a small fire with the correct extinguisher if trained and safe to do so.
- Evacuate via the nearest marked exit; do not use elevators.
- Go to the assembly point in the north car park; await the roll call.

Injury / first aid

- Make the area safe (LOTO machinery if needed) before approaching the casualty.
- Call a trained first aider; do not move a seriously injured person unless in danger.
- Report every injury and complete an incident report (see [incident_report_form](#)).

Chemical spill

- Small spill: use the spill kit and PPE per the SDS (see [chemical_safety](#)).
- Large spill or any spill reaching a drain: evacuate the area and call the Safety Officer.

Key contacts

Safety Officer ext. 4911. Emergency services: dial the site emergency number posted at each phone.
